

New Saskatchewan dinosaur!

Thescelosaurus assiniboiensis

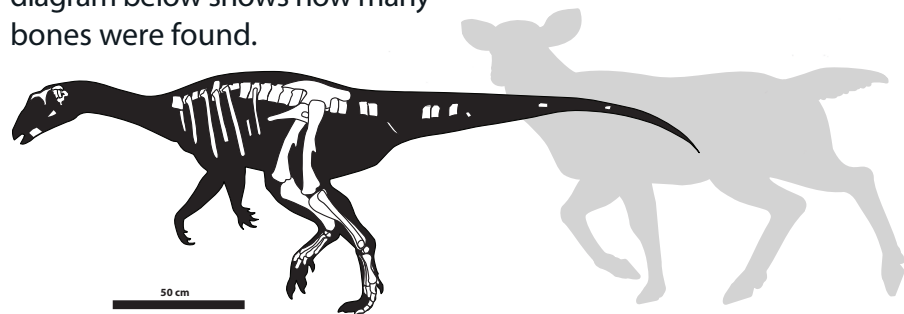

(THES-kel-oh-SAWR-us ah-SIN-ni-boy-EN-sis)

Art by Peter Bond

This deer sized plant-eating dinosaur roamed Saskatchewan 66 million years ago. It lived alongside other dinosaurs like *Tyrannosaurus* and *Triceratops*. The diagram below shows how many bones were found.

Find these bones →

Can you find the *Thescelosaurus* bones downstairs in the Earth Sciences Gallery at the Royal Saskatchewan Museum in Regina, SK?

Museum scientists have made exact copies of the bones of this dinosaur for this display. And you can see the original bones if you visit the RSM Fossil Research Station at the T.rex Discovery Centre in Eastend, SK!
